

## WHITE OR COLORED POOL PLASTER REPAIR FOR UNDERWATER OR ABOVE WATER FAST SET REPAIRS

### E-Z INSTRUCTIONS:

#### UNDER WATER REPAIRS:

1. Remove loose cement and chip area at least 3/8" deep. Make sure the edges are chipped straight down (not beveled or slanted). Clean the surface.
2. Add water sparingly to **E-Z PATCH® 1 F.S. DRY CEMENT MIX** and mix it into a very thick consistency enough to be used within 5 min. Use warm water for faster set and cold water to slow set.
3. Wait a couple of minutes (until the materials start to harden), place a little more than needed in your hand covering it inside of your fist or in a plastic bag. Apply at the repair area immediately pressing **E-Z PATCH® 1 F.S.** firmly with a trowel.
4. Slowly flatten smooth and flush with a trowel = flush with the existing plaster, clean edges and slowly back away from repair. Allow repair to set hard before swimming.

#### ABOVE WATER REPAIRS:

1. Follow steps 1. & 2. above but do not wait and add a little more water.
- 2a. **CRACK REPAIRS:** Rub E-Z PATCH® 1 F.S. deep into crack and remove excess with a moist sponge.
- 2b. **CHIPS OR LARGER AREAS:** Firmly trowel E-Z PATCH® 1 F.S. filling the area = flush with the existing plaster. Trowel flat and smooth. Remove excess from edges with a moist sponge. Trowel once again for a finished repair. \*Allow repair to set hard before filling pool.

To make a Custom Color with any of our cement type repair supplies, use any cement dye.

View our instructional repair video showing how to do this repair at [www.e-zpatch.com](http://www.e-zpatch.com)

### E-Z ANSWERS to some Frequently Asked Questions

- **Fast Set formulas do not require Liquid Bonder**
- **Product will cure faster in hotter weather, slower in cooler weather**
