

Pentair Pool and Spa Leak Detector Kit

Instructions for Use:

Attach the leak detector dispenser to the end of your swimming pool pole by pressing it over the end of the pole. Place the 1/2 ounce bottle of leak detector dye solution into the dispenser. Remove the cap from the solution bottle. You are now ready to test for leaks as follows:

1. Most leaks are in places such as around pool lights, return line fittings, main drains, visual cracks, etc.
2. Simply position the leak detector beneath the surface of the water adjacent to a suspected leak. By pulling the string (16' long) the test dye will be expelled. Only enough dye to cloud the water in the immediate area of the suspected leak is needed.
3. Visual confirmation of a leak is determined by seepage of the dye into the leak.

Test should be made with the pool pump turned off. Also, return line leaks can be detected by expelling dye at eyeball fittings. If there is a leak, dye will seep into return line outlet. Your leak detector can also be used as a method of spot treating pools with liquid chlorine, acid or algae treatment. Simply remove dropper bottle cap and fill the spot treatment bottle with the liquid and dispense on the trouble spot.
